WORK EXPERIENCE

Senior Fullstack & AI Engineer — Freelance

Sanofi

📅 August 2025 – Present 📍 Paris, France

- Designed and productionized complex LangGraph agentic workflows for automated medical document generation, used by 2000 users / processing 10000 documents.
- Built agent tooling and orchestration capabilities in collaboration with 8 data scientists / engineers.
- Designed evaluation datasets containing 500 cases and automated evaluation pipelines for agentic workflows.
- Designed and implemented collaborative document workflows supporting over 100 concurrent users.

Python LangGraph LangChain React AWS

Senior Fullstack Engineer — Freelance

Padoa

📅 November 2024 – August 2025 📍 Paris, France

- Collaborated with Google on the production adoption of the Web Bluetooth API, with Padoa among its early adopters.
- Led the migration of browser extensions to Manifest V3.
- Designed and integrated digital signature workflows processing over 10,000 medical documents per day.
- Designed a company-wide frontend state management architecture.

Angular Postgresql NodeJs Web Bluetooth Chrome C#

Typescript

Senior Fullstack & AI Engineer — Freelance

Engie Digital

📅 July 2024 – November 2024 📍 Paris, France

- Designed the infrastructure of an enterprise agentic AI platform using LangChain and PostgreSQL/pgvector.
- Designed and implemented a company-wide authentication architecture based on Okta.
- Built reusable Terraform modules, Kubernetes CRDs, Python middleware and Node.js middleware to standardize authentication across applications.
- Developed an OpenAI-powered assistant platform reusable by multiple Engie teams for their own business use cases.
- Collaborated with the design system team to create company-wide components for AI applications.

PROFILE

Senior Software Engineer with 8+ years of experience designing and delivering production-grade systems across AI, cloud and web. Specialized in agentic AI, fullstack architecture and cloud-native applications, with experience leading technical initiatives in large enterprise environments.

SKILLS

Frontend

- Angular, React, Cordova, Phonegap, Ionic, React-Native, jQuery, tailwind, Scss, Figma, NextJs, Astro.

Backend

- Nodejs, Express, NestJS, NextJS, Rust, Python, C/C++.

Llms

- Openai, Claude, Langchain, LlamaIndex, Langgraph.

Messaging Queues/event streaming

- RabbitMQ, NATS, Kafka.

Database/ORM

- Sequelize, Postgresql, Mysql, Prisma, Elasticsearch, Redis, MongoDB, Mongoose.

CI/CD

- Github actions, Jenkins, ArgoCD.

Testing

- Cypress, Jest, Selenium, Protractor, Mocha.

API

- Restful, gRPC, tRPC, SOAP, MQTT...

Monitoring

- Sentry, Rollbar, Grafana, Prometheus, Kibana.

Infrastructure

- Docker, Kubernetes, Terraform, AWS, Azure, Vercel, Ovh.

Hardware

- ESP (ESP-IDF), Xtensy-based mcu, ARM-based mcu (STM32x, Cortex), VHDL, Power electronics.

OPEN SOURCE

Angular

- Participated in the new API for form's events.
- Added Async redirects to the router api.
- Working on dynamic forms from signals.
- Documentation contributions.

VanJs

- library link: <https://vanjs.org/>
- Added redux store plugin to the library.

Lead Software Engineer

Citron

April 2023 – July 2024 Paris, France

- Led frontend architecture and technical standards across a team of 23 engineers.
- Designed CI/CD pipelines across repositories, enabling automated testing and ephemeral environments for every pull request.
- Introduced a company-wide Design System and Storybook adopted by 4 teams / products.
- Mentored 9 developers and organized technical training on TypeScript, RxJS, NgRx and reactive architecture.

DockerNodeJsNestJsJiraKafkaAwsTerraform

RabbitMQAirflowExpressKubernetesArgoCDGrafana

Fullstack Engineer

Padoa

March 2020 – April 2023 Paris, France

- Developed telemedicine applications serving over 1 million users, including video consultations and remotely controlled medical devices.
- Built C# integrations connecting medical devices to web applications through WebSockets.
- Developed Cordova/iOS plugins, Chrome extensions and integrations with French government APIs.
- Led features from technical design through implementation and production delivery.

Objective-CRustPostgreSQLDockerFigmaNodeJs

C#NotionSwaggerElastic searchScssExpressJenkins

Embedded IoT Devices Engineer

Ursum

Aug 2018 – Feb 2020 Estonia, Tallinn

- Developed an Android/iOS application to tune and control over MQTT an ESP32-based Data Logger and actuator.
- Developed an ESP-32-based Data logger.
- Developed an STM32F7 actuator that controllers lighting intensity, frequency, and direction.
- Developed a server app to collect and store the data.
- Deployed and managed the app on AWS and on premise.

ESP32Multi-threadingC/C++NodeJsAWSPhonegap

EDUCATION

Masters degree Networking and Telecommunications

Paris-Saclay University Rank: 1/33

Sept 2019 – Sept 2020 France, Orsay

Electronics Engineering

Ecole National Polytechnique Alger Score: 13.53/20

Sept 2017 – Aug 2019 Algeria, Algiers

INFLUENCES

Refactoring (James Sinclair)

Never have I ever worked in a company that didn't have legacy code. I think most of us would win at that game, but how win refactoring game, an important question often disregarded

Paradigms

Functional programming

Refactoring Guru

I'm a strong believer in the fact that no review of a code should use arguments of authority, refactoring guru helps me with illustrating and well explaining my ideas

Design patterns

Code smells

A skeptic's guide to functional programming (James Sinclair)

I fell in love with functional programming and purity and safety!

Paradigms

Functional programming
